# COMPACT AIR HANDLING UNIT SERIES

## Main characteristics

- > "Rooftop" product
- > Air throughputs from 4,000 to 30,000 m<sup>3</sup>/h
- Design from 14 typal rated outputs from 20 to 150 kW
- Integrated heat pump with the possibility of heating/cooling
- Continuous inverter control of heat pump power
- > Eco-friendly and safe A2L class R454C refrigerant
- > Possible to install a bivalent electric heater
- > Possible to install a fluid heater/cooler
- Possible to install exhaust fans and a rotary heat recovery exchanger
- > T2/TB3 class thermal insulated casing in the standard version
- Possible version for industrial and coastal environments with medium salinity, class C4 according to EN ISO 12944-2 (at additional cost)
- Design that meets the EKODESIGN requirement according to Commission Regulation (EU) 2016/2281
- The product complies with the requirements of Machinery Directive 2006/42/EC
- > The option to choose any RAL colour
- High level of variability of the I&C system design different types of controllers, remote controls, and other peripheral devices according to the customer's requirements
- Possible remote unit management using the CLIMAN cloud service
- > Emphasis on easy access for service and maintenance
- Own service centre possible to order commissioning service, warranty/post-warranty service
- > Possible warranty-period extension to up to 60 months

Compact air handling unit series R (product type: "ROOFTOP") is designed for the decentralised ventilation, heating, and cooling of commercial and industrial buildings. It allows for easy installation on the roof of a building, or next to it. The integrated reversible heat pump provides comfortable heating and cooling and, thanks to inverter control, offers smooth and efficient power control.

### **CERTIFICATION 2025:**

Low Voltage Directive (2014/35/EU) - LVD

**Electromagnetic Compatibility** (2014/30/EU) - EMC

Pressure Equipment Directive (2014/68/EU) - PED

**RoHS Directive** (2011/65/EU) - RoHS

Machinery Directive

(2006/42/EC) - MD

Ecodesign (2009/125/ES)

# Energy efficiency

The unit combines EC fans, a compressor with an inverter drive, and a mixing damper, which makes it possible to use both quantitative and qualitative controls for the quality of the internal environment and combination with free cooling. This ensures optimal comfort, eliminates temperature fluctuations, and significantly reduces energy consumption compared to traditional on/off systems. The unit is reversible, working in both cooling and heating modes. Thanks to smart supply temperature control, it provides a quality indoor environment at low operating costs. This unit achieves outstanding seasonal performance of SCOP 3.98 and SEER 4.83 - benchmarks that translate into real operating savings and a small environmental footprint.

## **VARIANT USES**

Free cooling

ODA EHA SUP ETA

Mix of fresh and exhaust air

100% circulation

100 % fresh air

## Smart controls

The product is designed for the smart era – it supports cloud connection, which facilitates remote monitoring, control, and diagnostics from anywhere. Building managers have access to real-time data and can respond immediately to alerts, significantly reducing downtime and service costs. The system can also be paired with an optional room controller for local temperature and fan speed adjustment, and it can also be controlled from a mobile phone. For full integration into the building, the unit supports BMS protocols, such as Modbus or BACnet, and communicates seamlessly with central control systems. It's not just a machine – it's a smart machine.

3 Heat pump evaporator

4 Filters

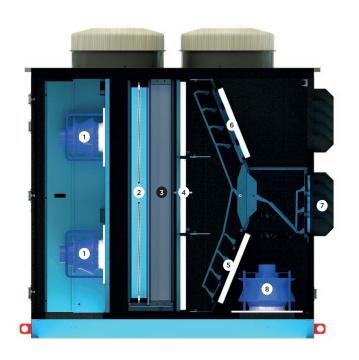

6 Mixing damper

6 Fresh air damper

Exhaust air damper

8 Exhaust air fan

## Climan control

We turned 20 years of experience in the management of HVAC systems into state-of-the-art Climan control. We developed entirely new control software, which, in combination with our own hardware modules, offers an outstanding price/performance ratio.

### Maximum flexibility and efficiency

- > Fully-modular software allows you to control units, or indeed any set of Mandík units.
- Modbus RTU for intelligent control of fans and circuits maximises energy efficiency.
- Possible simultaneous control according to temperature, humidity, CO<sub>2</sub>.
- > Communication options: Analog, ModBus, BACnet.

## Modern technology for remote management and visualization

- Integrated web server written in the most popular JavaScript framework, inspired by Google Material Design.
- > Fully-responsive visualization control from PCs, tablets, mobile phones, and industrial displays.
- Remote Proxy connection to PLC the possibility of remote management, software updates, and rapid response to customer requests.

### Full cloud management

- New Cloud Climan (https://climan.online) with mobile application.
- > Complete data history, remote control of the unit from anywhere.

# TECHNICAL PARAMETERS

Unit	[-]	A			В				С						
Nominal air flow	[m³/h]	4000	6000	8000	10000	12000	14000	16000	18000	20000	22000	24000	26000	28000	30000
